

LFS - LIGHT FIT SYSTEM

Based on the experiences of the past and the results of our research, in which we have worked closely together with our team-riders, we have defined a completely new requirement profile for an adjustment system. When every second counts, good fit is essential. The aim was to develop a system that holds the helmet quickly, safely and yet more comfortably against the head. The adjustment mechanism is particularly small and light; it is effortlessly simple to adjust the size using just two fingers. In addition, the height of the LFS can be vertically adjusted to three positions, guaranteeing an optimal fit. Perfect arrangement of the straps ensures unrestricted wearing comfort for men and women. Higher performance with a 15% reduction in weight for a 100% more efficient system!

CLEAN TEX PADS

CRATONI CLEAN TEX PADS are treated antibacterially and therefore prevent the rise of bacteria within the helmet.

As a consequence, longevity and long-lasting hygienic freshness is achieved.

INMOLD TECHNOLOGY

The EPS material is directly foamed into the outer shell which makes up for a perfect fusion of the two materials. As a result, an extremely safe and solid overall-construction develops and weight is kept at a very low level.

REARLIGHT

Life saving visibility: Our innovative REARLIGHT is an essential and easy to use safety upgrade. With a simple "click" you and your kids are ready for a ride in the dark of dawn.
