2 Year Free Replacement Warranty
Exclusive Golden Kevlar® + Nomex® Hi-Temp Blend
Easy Peel and Stick. No Messy Adhesives. No Pre-Shrinking.
Top and Bottom Gaskets + Bonus Chimney Seal

High-Que Gold Standard Gasket™ Upgrade Kit Installation Instructions

GOLD STANDARD GASKET™ 2 YEAR WARRANTY

Gasket replacement is an investment of your time and energy in addition to your purchase of this product. Ensuring proper installation of the gasket and adjustment of the hinges, bands, and other adjustable features after completing the application of the gasket kit will reduce the possibility of a gasket failure. Ceramic grills require periodic check and tune up of the hinges and bands to close properly.

High-Que LLC warrants this high-performance grill gasket for application on ceramic grills for a period of 2 years from the date of purchase against failure of the felt or adhesive materials to properly seal your grill when used at ordinary grill temperatures below 400°C. Symptoms of covered failure may include peeling away, thinning out, or falling into the grill. Proof of purchase and failure required for free replacement under this warranty coverage. Saturation with grease and steam is normal and gasket may discolor as a result.

Please save your proof of purchase for warranty claims. Please call 1-855-HIGH-QUE (1-855-444-4783) in the US and Canada, or contact us by email at CustomerService@high-que.com

A Few Frequently Asked Questions

Q: I have heard about preshrinking the gasket before applying. Is this necessary?

A: No, do *not* preshrink the material. Avoid stretching during application and compress the material as you work along the inside edge. The small ripples will disappear.

Q: The color of my gasket is not white. Is this a Nomex® gasket?

A: Our new Gold Standard Gasket™ felt incorporates a blend of genuine Kevlar®, Nomex® and other high-temperature fibers. It was developed to improve the performance of our already popular gasket kit. It is thicker yet softer with more gap filling ability, will perform at higher temperatures and shrink less, and has improved adhesion to ceramic grills.

Q: What is the temperature rating?

A: This gasket is warranted to 400°C on *ceramic grills only*. However, cooking at temperatures above 350°C is usually both unnecessary and dangerous.

Q: Where can I find cold weather install tips, troubleshooting information, my nearest dealer, and more FAQs?

A: Please visit www.high-que.com/FAQ
