

# Dr. Sticker®

Big stickers.

Thank you for placing your order at Dr. Sticker.

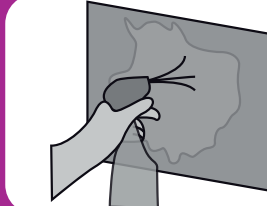

Follow the instructions of this guide to place your sticker the way you want it.

(The surface you are attaching the sticker to, must have a temperature of at least 5 degrees Celcius, the higher the temperature, the faster the stickers adhere.)

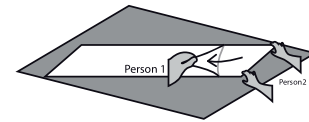

*Make sure your surface is clean and free from fats and oils.*

1

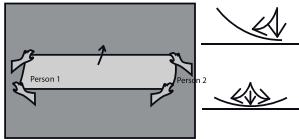

*You can do this with water or even a drop of washing detergent, this helps to place your sticker the way you want.*

2

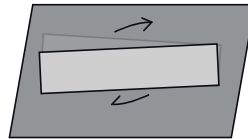

*Place the sticker on a surface, which is clean and free from fats and oils. Make sure someone holds the sticker, so it is much easier for the other person to pull of the paper.*

3

*Hold the sticker by it's edges and place it on the area where it should stick. Both persons could use a spatula to press it from top to bottom until the sticky side of the stickers has properly adhered to the surface.*

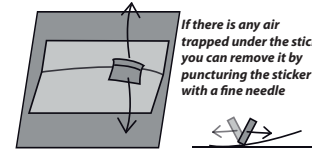

4

*In case you put the sticker on a wet surface, and it does not adhere properly, you have to wait for it to dry until it does adhere properly*

*Check that the sticker is attached properly. If it is not properly attached, adjust it carefully.*

5

*If there is any air trapped under the sticker, you can remove it by puncturing the sticker with a fine needle*

*Press from the middle of the sticker to the outer edges to remove any air that is trapped under the sticker. If you put the sticker on a wet background, you should let it dry well. After two days it is eventually possible to clean.*

6

If you might have bigger stickers, it could be handy to place the sticker with two persons at least.
