

# GENERAL HYDROPONICS®

## FLORADUO® All amounts per 3.79 Liters (1 US Gallon)

### All Amounts per 3.79 Liters (1 US Gallon)

#### Drain to Waste Nutrient Solution Tips:

- Keep nutrient solution temperature below 75° F (24° C).
- Allow 5% - 25% runoff during each irrigation.
- Consider fresh water irrigation after 1 - 3 nutrient applications.
- To flush apply fresh water irrigation after three nutrient applications to flush excess mineral accumulation.
- Keep nutrient solution aerated.
- For best results maintain nutrient solution pH between 5.5 - 6.5.

#### Troubleshooting factors to consider:

- Arid, bright, hot environments cause plants to drink more than if they are grown where it's humid, dim, and cool. Thus gardeners should use less concentrated nutrient solutions when growing conditions are more intense in order to lessen the risk of overfeeding.
- The pH (acidity or alkalinity) of a nutrient solution affects the availability of the elements contained within. Use GH pH adjusters to maintain nutrient pH between 5.5 - 6.5.

### Drain To Waste Program

		WEEK # GROWTH STAGE: PPM RANGE:	GROWTH (18h photoperiod)			BLOOM (12h photoperiod)											
			1 Seedling 250-300	2 Early Growth 550-700	3 Late Growth 750-1000	4 Transition 600-800	5 Early Bloom 700-950	6 Early Bloom 750-1000	7 Mid Bloom 750-1000	8 Mid Bloom 750-1000	9 Mid Bloom 750-1000	10 Late Bloom 750-900	11 Ripen 300-500	12 Flush 0-50

### Which comes first, Armor Si or CALiMAGic?

- When using both **Armor Si** and **CALiMAGic**, add **Armor Si** to the reservoir **first**.
- When using **Armor Si** and/or **CALiMAGic**, with **Flora Series**, these products should be added **prior to adding FloraMicro**.

# GENERAL HYDROPONICS®

## FLORADUO® All amounts per 3.79 Liters (1 US Gallon) Recirculating Program

### All Amounts per 3.79 Liters (1 US Gallon)

#### Recirculating Nutrient Solution Tips:

- Keep nutrient solution temperature below 75° F (24° C).
- Change nutrient solution every 7-10 days and top off with fresh water between nutrient changes.
- Keep nutrient solution aerated.
- For best results maintain nutrient solution pH between 5.5-6.5.

#### Troubleshooting factors to consider:

- Arid, bright, hot environments cause plants to drink more than if they are grown where it's humid, dim, and cool. Thus gardeners should use less concentrated nutrient solutions when growing conditions are more intense in order to lessen the risk of overfeeding.
- The pH (acidity or alkalinity) of a nutrient solution affects the availability of the elements contained within. Use GH pH adjusters to maintain nutrient pH between 5.5 - 6.5.
