

How we Measure our Filters

Measuring the Filter Length

Magnum Filter length is measured to the full length of the filter body.

It **DOES NOT** include any moulded features on the top or bottom of the filter- like handles or threads

Listed Thread Size	Actual Dimensions	
	Inside Diameter	Outside Diameter
1 1/2" MPT thread (Fine)	38mm	46mm
1-1/2" SAE thread (Coarse)	38mm	49mm
2" MPT thread (Fine)	51mm	59mm
2" SAE thread (Coarse)	51mm	59mm

Note: Magnum Filters **ALWAYS** specify the outside diameter of the thread!

Measuring the Filter Diameter

The filter diameter is the outside diameter .
Please note that different Filter manufacturers may have slightly different diameters for the same filter.
A few millimetres difference is rarely a problem.
