

STARTRONIC 530 230V

Overview

STARTRONIC 530 230V

cod. 829034

Digital, microprocessor controlled battery charger, maintainer and starter for charging all types of batteries (GEL/AGM/START-STOP), with 6/12/24V voltage and starting of cars, vans and trucks. Startronic protects the on-board electronic such as ABS, airbag, electronic injection, etc. Running modes: TEST, CHARGE, TRONIC, START and STAND-BY. The STAND-BY function is activated through connection to the cigarette lighter outlet of the car, it allows to disconnect and charge the car battery without erasing the preset values of the on-board computer. The TRONIC function allows for the electronic control of charging current, automatic interruption and restart. The new implemented technology SAFE START does not damage the on-board electronics during the starting phase (START) because it eliminates the overvoltages typical of the traditional starters. Characteristics: choice of charge current 1÷40A * display to check battery voltage, charging current and time * display to check battery status * protection against reverse polarity, battery failure, thermostatic interruption, faulty battery charger.
