865.028.00/A English - 2016/40

In accordance with our policy of continual product improvement, equipment supplied may differ from the specification detailed herein.

PROFILE²™ HALF MASK

PROTECTION AND COMFORT COMBINED

Scott's Profile² is an advanced twin filter half mask that combines comfort, protection and low through life costs with exceptionally low breathing resistance.

Perfectly balanced, user friendly and modern in design, Profile² accepts the comprehensive range of highly efficient Scott Pro² gas, particulate and combined filters to provide respiratory protection in a wide variety of applications.

Profile² is the fitting solution to your respiratory hazards.

● Exceptional comfort and fit

Manufactured from an odourless, lightweight TPE (thermoplastic elastomer) Profile²'s facepiece is incredibly soft and comfortable to wear for long periods.

- Large diameter valves create low breathing resistance and significantly reduce wearer fatigue
- Latex and silicone-free to ensure no allergic skin reaction or irritation
- Head harness and neck buckle support the mask comfortably without feeling tightness in the straps
- Chin cup drainage to channel perspiration away from the face

● Performance and Protection

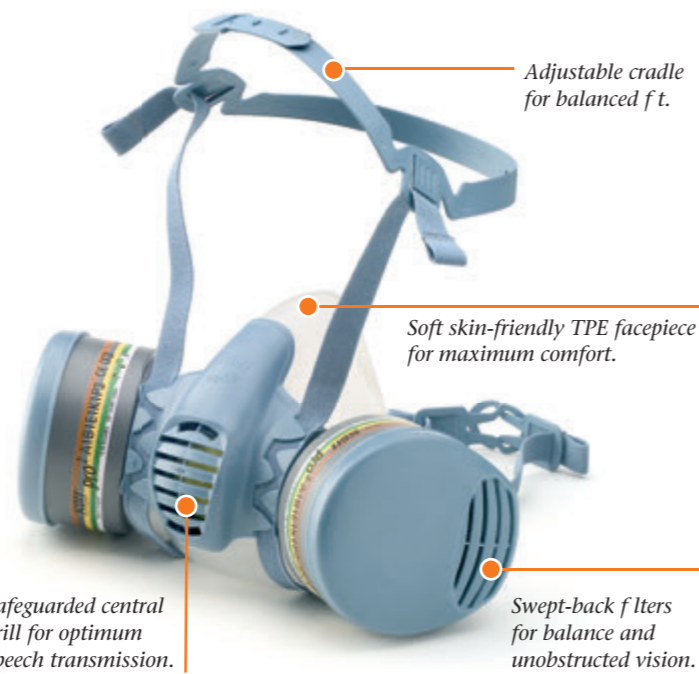

Designed for an efficient fit, the head harness incorporates a comfort cradle and neck buckle that distributes weight evenly and prevents head movement from interfering with the face seal.

- Choice of three sizes with wide face seal for optimum and efficient fit
- Adjustable head cradle to fit a variety of head shapes
- Spark, splash and contaminant guards for filters and exhale valve
- Central grill allows effective speech transmission
- Low profile and swept back filters provide balance and unobstructed field of vision
- Bayonet connection provides secure filter locking mechanism

● Easy to use

Easy to fit and adjust, the mask's intuitive donning process promotes high wearer acceptance.

- Head cradle and neck strap are easy to fit and simple to adjust
- Low profile design ensures compatibility with other PPE
- Easy-fit filter mechanism enables fast, first time connection
- Clear face piece is user friendly and easy to identify when cleaning is necessary

Adjustable cradle for balanced fit.

Soft skin-friendly TPE facepiece for maximum comfort.

Safeguarded central grill for optimum speech transmission.

Swept-back filters for balance and unobstructed vision.

● Low through-life costs

Profile² and Pro² cartridges are extremely cost efficient when compared with disposable, low maintenance or other re-usable respirators. Every Pro² cartridge comes complete with a pre-filter cover to protect against sparks, splash and contaminants, and maximise cartridge life.

- Minimal number of components
- Comprehensive filter range
- Easy to clean, inspect and maintain
- Rear facing filter inlets draw air from further back, away from the work area, to maximise filter life
- Hygiene storage bag supplied with every mask to protect and aid easy user identification
